TECHNICAL SKILLS

Content Management Systems:	WordPress, Joomla, Drupal, Sitefinity, Sitecore, Sanity
Programming Technologies:	HTML5, CSS3, SCSS, JavaScript ES6, TypeScript, React, Next.js, PHP8
Design Software:	Adobe CC Photoshop/Illustrator, Figma, Sketch
Development Software:	Git, pnpm, Composer, webpack, WP-CLI, Docker, ZSH, PHPCS
Accessibility and QA:	WCAG 2.1 AA, axe, Lighthouse, HTMLProofer, Snyc

PROJECTS

Teleport Atlas (coding challenge) teleport-atlas.vercel.app

- Built Teleport's Atlas product landing page from a Figma spec in Next.js (App Router), going from nothing to a working page with Canvas product animations in about twelve hours.
- Scored a perfect axe run with zero WCAG 2.1 AA issues and a 100 Lighthouse mobile result across performance, accessibility, best practices, and SEO.
- Cut page weight from about 2.5MB to roughly 950KB, including roughly an 89% drop in the font payload from subsetting with fonttools and Brotli.
- Hardened the build and supply chain with SHA-pinned GitHub Actions, a pnpm cooldown and allowlist against a frozen lockfile, and escaped JSON-LD.
- Moved the page onto Sanity as a headless CMS afterward, with visual editing and a publish webhook. Source is public on GitHub.

Seismic seismic.com

- Two 1,000-page site migrations for seismic.com: WordPress to WordPress in 2022 and WordPress to Sitecore in 2025, keeping the site live throughout each cutover.
- Served as QA triage lead across a cross-functional team of 20+ during a high-pressure rebrand sprint.
- Migrated seismic.com from TranslatePress to WPML for multilingual support and trained content staff and EMEA regional teams on the new workflow; the 2022 relaunch drove a 50% increase in site visitors.
- Improved page load times from ~3s to ~2s across both migration cycles.

Republic Ranches republicranches.com

- Integrated Google Maps JavaScript API to build interactive property map for filtering and searching.
- Utilized real estate schema markup on property detail pages for greater search engine relevance.
- Reduced image library from 20GB to 8GB by automating WebP conversion and compression on all uploads; improved page load times from ~3-5s to ~1-2s.

San Antonio Legal Services Association sa-lsa.org

- Developed custom PHP Gutenberg blocks so admins could add UI components without code.
- Integrated the Volunteer Hub API for clinic opportunities serving families in need of pro bono services.
- Configured the Legal Server API with WP All Import to schedule data into a custom post type, surfacing pro bono cases for lawyers with a filtering UI.

PROJECTS — CONTINUED

Exit Intent Popup Plugin

github.com/Blake-C/wp-exit-intent-popups

- Built a WordPress plugin for exit-intent and timed popups with A/B testing, impression tracking, and a per-popup conversion dashboard with CSV export.
- Implemented exit-intent detection for both desktop (cursor exit via mouseleave) and mobile (scroll-reversal heuristic), with six configurable position modes including cursor-relative modal placement.
- GA4 event tracking for popup impressions, CTA clicks, and dismissals.
- Built the frontend in vanilla JavaScript with WCAG 2.1 AA compliance: ARIA dialog attributes, keyboard focus trap, ESC key support, and reduced-motion animation fallback.

PROFESSIONAL EXPERIENCE

Self-Directed Engineering — DigitalBlake.com

July 2025 — Present

- Applied AI-assisted development workflows across a Next.js and Sanity project, native macOS tooling, and digitalblake.com.
- Built native macOS applications, directing AI tooling through the Swift implementation and publishing write-ups on the results, including a SwiftUI and AppKit UI performance comparison.
- Built and maintain digitalblake.com on Jekyll with a Docker-isolated toolchain, esbuild, inlined critical CSS, and subset WOFF2 fonts, deployed by GitHub Actions running HTMLProofer and Snyk, with a gitleaks pre-commit scan and a pnpm release-age gate guarding the supply chain.
- Researched and published on WCAG 2.1 AA conformance testing and on which WCAG version the European Accessibility Act, ADA Title II and III, and Section 508 each require.

Senior Web Developer — Seismic

February 2022 — July 2025

- Served as development lead for the WordPress-to-Sitecore migration, collaborating with design, brand, content, and SEO specialists and participating in leadership meetings to resolve technical conflicts.
- Served as a technical point of escalation to align stakeholders across teams during high-stress, timeline-constrained delivery sprints.
- Documented workflows and technical setup for long-term knowledge handoffs across security, leadership, and privacy teams.
- Led post-business-hour code deployments and quality assurance for seismic.com.
- Onboarded team of 6 contractors in operating procedures of seismic.com for developers and producers.

Web Developer — Gray Digital Group

January 2014 — February 2022

- Communicated with Account Executives, Project Managers, and Designers to determine client requests and estimate time needed to research, design, develop, test, and launch projects.
- Trained clients in groups of 1-6 on how to use the admin UI for WordPress, Joomla, Drupal, and Sitefinity.
- Quality assured sites to track browser support, HTML validation, script errors, usability, and build quality.

Web Developer — DigitalBlake.com (Freelance)

January 2013 — February 2022

- Developed WP Foundation 6 standard coding library for code consistency between teams.
- Developed mobile mega menu jQuery plugin that generates a horizontally scrollable navigation.
- Created a JavaScript NPM module using the YouTube API to create custom embedded playlists.
- Programmed Joomla 3.x modules for social media sharing without utilizing JavaScript.
